

Section C: Software Testing Report

Application Description:

- Purpose of the application:
 - The purpose of the application is to create a Mobile Stock Capture Windows form application for a retail inventory company

- Main System Functions:
 - The main system functions are to add values via the Mobile Code, the make of the phone and the overall quantity, then insert a record when the user clicks on the "Add" button
 - The user can also delete a record when the user types in the Mobile code which shows a message stating the user deleted the record
 - The user can also find a record by typing in the mobile code and then it will pop up a message in the top part of the form to show if the record has been found otherwise it will prompt a message to the user stating that the record was not found

- User inputs captured:
 - The User needs to type in a value in the "Mobile code" text box
 - The User needs to type in a value in the "Make" text box
 - The User needs to type in a value in the "Quantity" text box

Test Case Table:

Test Case	Input	Expected Result	Actual Outcome	Status
TC-01	Leave the fields empty	Gives a popup message stating that fields cannot be empty	"Error: Please enter values in the fields"	PASS
TC-02	Try to pass a string into the quantity field	Gives a popup message stating that the input is invalid	"Invalid Input: Please enter a number in the quantity field"	PASS
TC-03	Leave the fields open and search for a record	Instead of crashing the application, let the user see a message saying stating to not leave fields open.	"Record not found"	PASS
TC-04	Type in the fields and search for a record	It should give a result back with a message to let the user know that the record has been found	"Record not found"	FAIL
TC-05	Type in the fields and delete a record	It should delete the record that was inserted and prompt a message to let the user know that it was successfully deleted	"Record not found"	FAIL

Defect Log:

1) DF-01:

Description: Typed in a value in the mobile code text box, clicked the delete button but when it was supposed to be deleted and prompted a message, instead it shows that the record was not found

Status:Open

Severity : Critical (The record is still added and shown in the table)

2) DF-02:

Description: Typed in a value in the mobile code text box, clicked on the search button but when it was supposed to be deleted, it shows that the record was not found

Status : Open

Severity : Critical (The record does exist in the table but it is not being found)

Recommendations

1) Instead of using raw data entires, initialize a List object that you can add values to it from the input of the user, following a foreach loop to read through the data entries in the list and then add them, additionally do this for the search and delete button to ensure records are properly being deleted or found. Ensure validation does exist across the entire system

- Extra recommendations :
- Use a try..catch block to handle incoming errors that can be handled smoothly additionally use the "clear()" method to enhance user usability.
